

Environmental Sustainability Policy

We are committed to environmental protection and we aim to deliver net positive environmental outcomes in all our business operations.

Think Globally

As a global company we embrace our responsibility to contribute to solutions that address worldwide challenges such as climate protection and natural resource conservation.

Environmental sustainability is Siemens' core business, and our innovative products, solutions and services provide improved environmental outcomes for our customers, including:

- Renewable and efficient power generation and transmission;
- Energy efficient buildings, transport, drives, automation, health solutions; and
- Alternative supply of clean water through desalination and wastewater recycling.

Act Locally

Our environmental sustainability program is based on the principles of ISO 14001: Environmental Management Systems, and every individual employee and service provider is responsible for ensuring environmental protection and management on a day-to-day basis.

We maintain open, transparent and accurate environmental performance reporting, and we are dedicated to continuously improving environmental performance in the following key areas:

- Greenhouse Gas & emissions to air
- Water & resource use
- Waste minimisation & recycling
- Energy consumption

To minimise our impacts and deliver net positive environmental outcomes, we will;

- Set and communicate the Environmental Sustainability Policy, targets and strategies to relevant stakeholders;
- Raise awareness among employees, contractors and suppliers to ensure they have the skills, resources and support to meet their environmental responsibilities;
- Identify, assess, control and monitor environmental hazards and risks, and report, record and effectively manage all incidents;
- Comply with legislation, regulations, industry standards, operating procedures and customer requirements for environmental protection and management; and
- Conduct regular audits, external benchmarking and management reviews of Siemens' Environmental Sustainability Management program.
