

Extending the functional life of your automation equipment

Siemens Australian Remanufacturing Centre is a sophisticated diagnosis and repair facility with highly trained specialist technicians.

Siemens Remanufacturing Service helps you maintain your plant in optimal condition by remanufacturing faulty equipment into an as new condition. The service reduces unpredictable maintenance costs by providing a fixed price per transaction and by providing a full six-month manufacturer's warranty.

The Challenge

Maintaining your industrial automation and control equipment in optimal condition during its planned life cycle. Unpredictable maintenance costs need stabilising whilst optimising in-house maintenance resources to achieve optimum performance. Replacement parts need to be reliable and backed by a manufacturer's warranty.

Return on investment through

- longer equipment service life
- additional manufacturer's warranty on replacement parts
- improved predictability of repair costs

Remanufacturing Services

Siemens Remanufacturing Services

The Solution

Siemens Industrial Automation and Control operates an advanced Remanufacturing Centre in Australia, with sophisticated diagnosis and repair facilities and highly trained specialist technicians.

Remanufacturing

This fixed-price service provides a full remanufacture of your equipment to as-new condition. Equipment is not just repaired, it is also brought up to current hardware and firmware specification and any suspect components are replaced.

The equipment is fully tested and cleaned, and is provided with an as-new 6 month warranty.

Remanufacturing goes beyond making your equipment fully operational, it effectively extends its useful life.

Equipment Update

If your equipment is fully functional but you need to extend its useful life or integrate it with current Siemens products, we can provide an update service to install the applicable hardware or firmware revisions.

Process Instrumentation Calibration

A workshop based calibration service is available for all Siemens Process Instrumentation equipment. This service is available either on an ad hoc basis or as part of a scheduled workshop or onsite calibration service.

When arranged as a scheduled service, the schedule is agreed in advance to suit your operational requirements.

Whether performed onsite or in the workshop, the service is performed by a highly qualified Siemens PI specialist.

Siemens comprehensive range of remanufacturing services effectively extends the functional life of your industrial automation equipment.
